## 1. Objective

In August 2002, NEC has set “GREEN PROCUREMENT GUIDELINES (FOR SUPPLIERS)” with that declared that it shall give priority to procure environment conscious products from the companies which actively address environmental conservation.

On the other hand, with the considerably changing social environment which surround environmentally conscious products products-related environmental regulations are also expanding.

In particular, EU RoHS directive\*<sup>1</sup> that restricts the use of specified substances in electrical and electronic products marketed in the European Union has expanded its scope of substances and similar requirements of the RoHS directive has expanded globally.

In addition, the REACH Regulation\*<sup>2</sup> enforced in June 2007 periodically releases information of candidate substances of very high concerns (SVHCs) and list of these substances is expanding, and these substances are specified as substances whose concentration value should be controlled in the products and in case the product contains more than the specified concentration value of these substances, it is made mandatory by the law to provide information necessary for the safe use of the product.

NEC (hereafter including the NEC Group) is determined to conform to the domestic and international legal restrictions of substances in products. Therefore, this guideline defines standard requirements for procuring materials, parts and other products from the suppliers for producing NEC’s electric/electronic products and systems.

## 2. Scope of Application

In principal these specifications apply to all the materials procured to build NEC products (electric/electronic products and systems) as well as items (such as packaging materials) used for shipping NEC products.

---

\*1: RoHS Directive:

DIRECTIVE 2011/65/EU OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 8 June 2011 on the restriction of the use of certain hazardous substances in electrical and electronic equipment. This EU law prohibits the sales of electrical and electronic products exceeding maximum concentration values of specific heavy metals (lead, mercury, cadmium, hexavalent chromium) or bromine flame retardant (PBB and PBDE) in the EU market after July 1, 2006.

The Directive has added the phthalates (DEHP, BBP, DBP and DIBP) to the list of restricted substances by Commission Delegated Directive (EU) 2015/863 of 31 March 2015 amending Annex II to Directive 2011/65/EU of the European Parliament and of the Council as regards the list of restricted substances

\*2: REACH Regulation:

REGULATION (EC) No 1907/2006 OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 18 December 2006 concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH),. This EU law, which took effect in June 1, 2007, establishes a comprehensive system for registration, evaluation, authorization, and restriction of chemicals. Manufactures and importers that will market substances, preparations, and articles in the EU are obliged, for example, to evaluate and register the substances, register and report the substances in the articles, and provide information about the substances in the articles under certain conditions. The article substances for which content information must be provided are known as candidate substances subject to authorization, commonly called SVHCs, which will be made public in a stepwise manner.

### 3. Timing of Application

When legal enactive date is newly introduced or revised, NEC does not procure materials from six months before the date.

### 4. Banned Substances

Banned Substances are the chemical substances including impurities which are prohibited to be included in the products intentionally or unintentionally. Table 1 shows the substances which are banned to be utilized for NEC's products.

In principle, NEC does not procure any products containing the "banned substances", thus NEC's suppliers are not allowed to use any of the "banned substances" in Table 1 in the products they sell to NEC. These requirements are concerned with product quality and if a product contains any of the "banned substances" without the consent of NEC, this will be regarded as a quality defect and the supplier shall assume liability for defect warranty as per the contract.

Note 1: In case there are new enforcement or revisions of treaties, laws, regulations, industry standards, etc., there may be temporal unconformities between the new requirements and specifications stated in this guideline. In such cases, new requirements shall be referred and conform to.

Note 2: Region specific chemical substances regulations of the destination country where NEC products are to be delivered, shall be confirmed and complied with.

## 5. Conditionally Banned Substances

Conditionally Banned Substances are the substances whose concentration values in the products are not permitted to exceed the maximum value defined legally. NEC's conditionally banned substances are shown in Table 2. Appendix 1 shows the examples and descriptions of these substances.

Even impurities shall not contain conditionally banned substances exceeding maximum concentration values described in Table 2. Unless otherwise specified, the values in Table 2 are regarded as the thresholds. If drawings, specifications or other documents regarding products to be procured include specific thresholds, those specifications are to be used. Note that the supplier has the responsibility to check and guarantee the content and concentration. If any of the products is found to contain conditionally banned substances exceeding maximum concentration values, this will be regarded as a quality defect and the supplier shall assume liability for defect warranty as per the contract.

Note 1: In case there are new enforcement or revisions of treaties, laws, regulations, industry standards, etc., there may be temporal unconformities between the new requirements and specifications stated in this guideline. In such cases, new requirements shall be referred and conform to.

Note 2: Region specific chemical substances regulations of the destination country where NEC products are to be delivered, shall be confirmed and complied with.

18	C9-C14 PFCA-related substances	a	Based on EU REACH Regulation (Annex XVII)	*10

- \*1 : The threshold of cadmium is 100 ppm (0.01wt %). The threshold of lead, mercury, chromium VI, PBB, PBDE, DEHP, BBP, DBP, or DIBP is 1000 ppm (0.1wt %).  
: The applications not listed in Table 2 shall be based on the Annex to the RoHS Directive.  
: Please refer the latest information of Annex III and IV of EU RoHS directive for the exemptions.  
: NEC will only accept the exempted products/parts no later than six months prior to expiry date of exemptions.  
: Duly consult the concerned division of NEC and allow enough time for preparing the alternatives before discontinuing the deliveries of particular products.
- \*2 : The threshold of cadmium is 20 ppm (0.002wt %). The threshold of mercury is 5 ppm (0.0005wt %). The threshold of lead is 100 ppm (0.01wt %).  
: Denominator in calculating concentration is total weight of batteries.
- \*3 : The threshold of the total weight of cadmium, lead, mercury, and chromium VI is 100 ppm (0.01wt %).
- \*4 : The threshold of the concentration of the tin element of an article with respect to the weight is 1000 ppm (0.1wt %).
- \*5 : The threshold of Azo Dyes is 30ppm (0.003wt %), which applies to textiles and leather in direct and prolonged contact with skin.
- \*6 : The substances shall not be added intentionally.
- \*7 : The threshold of single or the total weight of four substances is 1000 ppm (0.1wt %).  
: As mentioned in Section 3, NEC will not accept products containing these substances from January 7<sup>th</sup>, 2020.
- \*8 : This Convention restricts the manufacturing of specific products containing mercury.
- \*9 : The threshold of the total weight of C9-C14 PFCAs and their salts is 25 ppb. Reference substances are listed in Appendix 1.
- \*10 : The threshold of the total weight of C9-C14 PFCA- related substances is 250ppb. Reference substances are listed in Appendix 1.

## 6. Managed Substances

Managed substances are the substances of very high concern (SVHCs) as defined by EU REACH regulation. NEC's managed substances are the SVHCs listed in Declarable Substances List defined by IEC62474.

### 6.1 Providing Information about presence or absence of SVHCs

- Presence of SVHCs in the articles shall be determined and following steps should be taken:
  - (1) Supplier shall report without fail if the concentration value exceeds 0.1wt % in an article.
  - (2) Supplier shall report the concentration value to the best of its knowledge if the concentration value is lower or equal to 0.1wt %.
  - (3) If a SVHC is added, supplier shall immediately confirm the concentration value and report as per (1) or (2) above.

### 6.2 Report format for providing information on presence of SVHCs

- In case products are substances and preparations : Use chemSHERPA-CI format, or other

formats are also accepted

- In case products are articles: Use chemSHERPA-AI format, or other formats are also accepted.

\* Reporting the compliance information is mandatory.

### 6.3 Suggestion: Items in Scope of the Report providing the presence of SVHCs

- Items for which NEC requires the investigation information

## 7. Calculation of Concentration

### 7.1 Conditionally Banned Substances by EU RoHS directive

As per RoHS directive, concentration of conditionally banned substances shall be managed per “Part” of a product.

Part means a homogenous material of uniform composition throughout that cannot be mechanically separated into different materials. The concentration value in each part of the product should be lower than the specified threshold. Please refer Appendix 2 for concrete example of “Part.”

The concentration value is calculated with mass of homogeneous material (part) including conditionally banned substances as denominator and mass of conditionally banned substances in homogeneous material as numerator. However, in case the conditionally banned substances are metallic compounds, mass of only the metallic element will be taken as numerator}

### 7.2 “Banned Substances” and “Conditionally Banned Substances” by directives other than EU RoHS}

Apart from the Banned Substances by RoHS mentioned in Table 1 and conditionally banned substances in Table 2, supplier shall also comply with requirements set by other regulations for individual substances and calculate the concentration accordingly.

### 7.3 Managed Substances

The concentration of SVHCs defined by EU REACH regulation is not managed by homogeneous material (part) but by article constituting the products. When the concentration of any of the SVHCs contained in an article exceeds 0.1wt %, the supplier of the article is obliged to provide appropriate information for the recipient of the article to use it safely. Concentration is calculated by using the minimum unit mass of the article containing SVHC that constitutes the product as the denominator and the mass of SVHC contained in the article as the numerator. When different articles contain SVHCs, the concentration of each SVHC in all the articles must be controlled.

When the products are exported to the EU together with packaging materials such as boxes, the packaging materials are treated as individual items and the concentrations of SVHC in these items must also be controlled.

## 8. Request for Guarantee Submission

NEC may ask supplier to submit a guarantee document certifying that none of the products supplied contains “banned substances” and “conditionally banned substances” more than the threshold. The submitted guarantee should be approved by the supplier’s representative. Even if a warranty was not submitted, the supplier can’t be excused from the liability of defect guarantee.

For managed substances, NEC does not require the supplier to submit a guarantee as proof that the substance does not exceed the threshold.

## 9. Analysis Measurement

### 9.1 Banned Substances and Conditionally Banned Substance

NEC may perform acceptance test for the procured products to analyze and measure the restricted substances and substance groups. Further, NEC can also request suppliers to perform these analysis and measurements. In case, result (including the analysis result obtained by NEC's customer) of these analysis prove that product contains more value of banned substances than the threshold, NEC will ask the suppliers to conduct a thorough investigation to determine the cause (this includes pursuit of liability for defect warranty).}

### 9.2 Managed Substances

In principle, NEC does not require suppliers to conduct analyses and measurements for “managed substances”.

## 10. Exemption

In case NEC has agreed upon certain exemption in writing or by other means, further if documents like drawings, specification etc. clarify the exemptions, those specifications hereof shall not apply.

## 11. Revision

The modifications made to specifications shall be posted on the NEC Website (NEC Partners Site) regularly. However, specifications are subject to change without prior notice. Therefore, supplier must confirm for updates with the ordering department.

## **[Revision History]**

### **\*Revision to Ver. 2** (December 2004)

- Overall revision, broadening the scope of inclusion.
- In line with this revision, the title was changed from “Standards for Procurement Restriction on Substances Prohibited by the RoHS Directive” to “Standards Pertaining to Procurement Restrictions for the Inclusion of Chemical Substances in Products.”

### **\*Revision to Ver. 3** (July 2008)

- Minor amendment to sentences in Article 1 and 2.
- Amended Battery Directive in Table 2.

### **\*Revision to Ver. 4** (April 2010)

- Overall revision, to include the description of “managed substances.”
- Revised Table 1, “Banned Substances.”
- Added Table 4, “Framework for Defining Managed Substances.”

### **\*Revision to Ver. 5** (February 2014)

- Revised Table 1, “Banned Substances.”
- Revised indicative lists in Appendix 1 in line with substance lists of IEC62464

### **\*Revision to Ver. 6** (January 2015)

- Added a description for “Expiry dates of exemptions to the substance restriction requirements under the RoHS Directive as applied to NEC products” in Table 3.

### **\*Revision to Ver. 6.1** (February 2015)

- Corrected typos

### **\*Revision to Ver. 7** (June 2016)

- Revised Table 1, “Polychlorinated naphthalenes (more than 2 chlorine atoms)”
- Added Table 1 and 2, “DEHP, DBP, BBP, DIBP.”  
Conditionally banned substances for the supply of products to NEC is one year prior to the date of enforcement by the EU RoHS Directive. After 22 July 2018, only products below the threshold can be supplied.

### **\*Revision to Ver. 8** (April 2017)

- Revised Table 1 and 2, “Tri-substituted organostannic compounds (tributyltin compound, triphenyltin compound)”
- Revised Table 2, “Azocolourants and Azo dyes which form certain aromatic amines”  
Application, scope and threshold are changed.
- Revised Appendix 1, “Conditionally Banned Substance.”
- 5.2 Survey format is changed to chemSHERPA-CI/chemSHERPA-AI from MSDSplus/AIS.
- 6.2 Changed the unit of content concentration, which is the criterion for providing information on controlled substances

### **\*Revision to Ver. 9** (July 2019)

- Added Section 3 “Timing of Application” and revised all the numbering.
- Revised Key Applicable Law and Regulation of PFOS in Table 1 from EU REACH (Annex XVII) to Regulation (EC) No 850/2004 of the European Parliament and of the Council of 29

- April 2004 on persistent organic pollutants and amending Directive 79/117/EEC.
- Added Perfluorooctanoic acid (PFOA) and its Salts and EU REACH ~~((Annex XVII))~~ as Key Applicable Law and Regulation in Table1.
  - Also added EU REACH legal requirements enacted in July 2020 and NEC's target date not to procure the products containing PFOA and its salts.
  - Revised the number of substance group of Table 1 after adding PFOA and its salts.
  - Deleted information of four phthalates defined by EU RoHS directive as effective date has been already past.
  - Deleted Table 3 as the exempted date has been already past.
  - Revised the explanation of conditionally banned substances and deleted Table 4 and supplemental explanation on \*1-8.
  - Revised the explanation of concentration calculation.

\*Revision to Ver. 10 (October 2021)

- Added Phenol, Isopropylated Phosphate (3:1) (PIP (3:1)) and Bis(pentabromophenyl) ether (decabromodiphenyl ether) (DecaBDE) as Key Applicable Law and Regulation in Table1.

\*Revision to Ver. 11 (September 2022)

- Added C9-C14 PFCAs and their salts in Table2.
- Added reference substances list of C9-C14 PFCAs and their salts in Appendix 1.
- Added C9-C14 PFCAs- related substances in Table2.
- Added reference substances list of C9-C14 PFCA-related substances in Appendix 1.

\*Revision to Ver. 12 (November 2023)

- Added "b Batteries" to "Major Application or Scope" in Table 2 No.2.
- Updated b for "Major Application or Scope" in Table 2 No.1 and No.3 to "EU Battery Regulation".
